

Machine learning to improve tactical flight decision making

The case of Pilot3

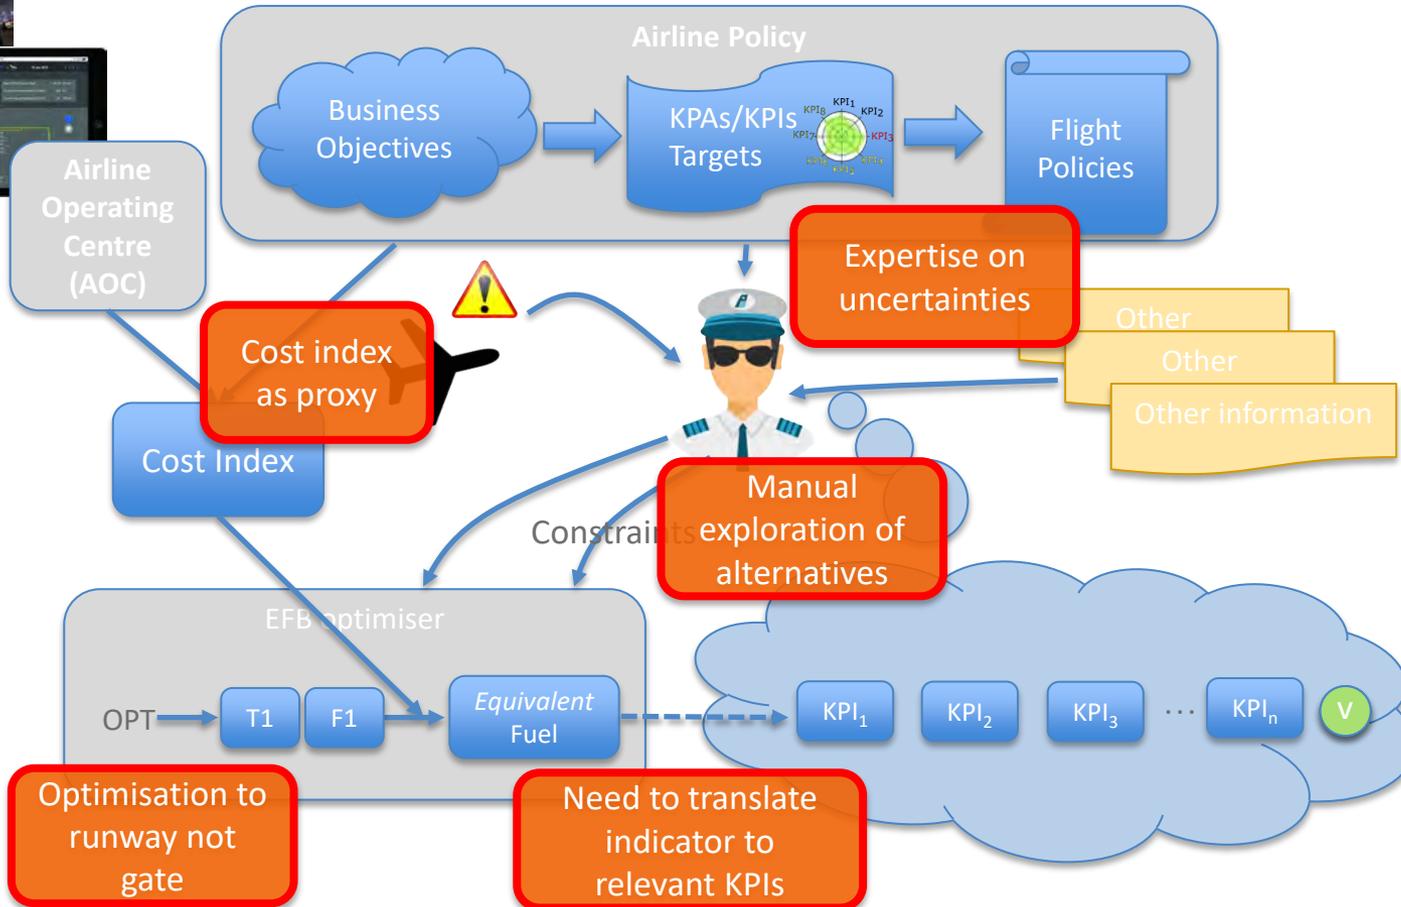

03 September 2021

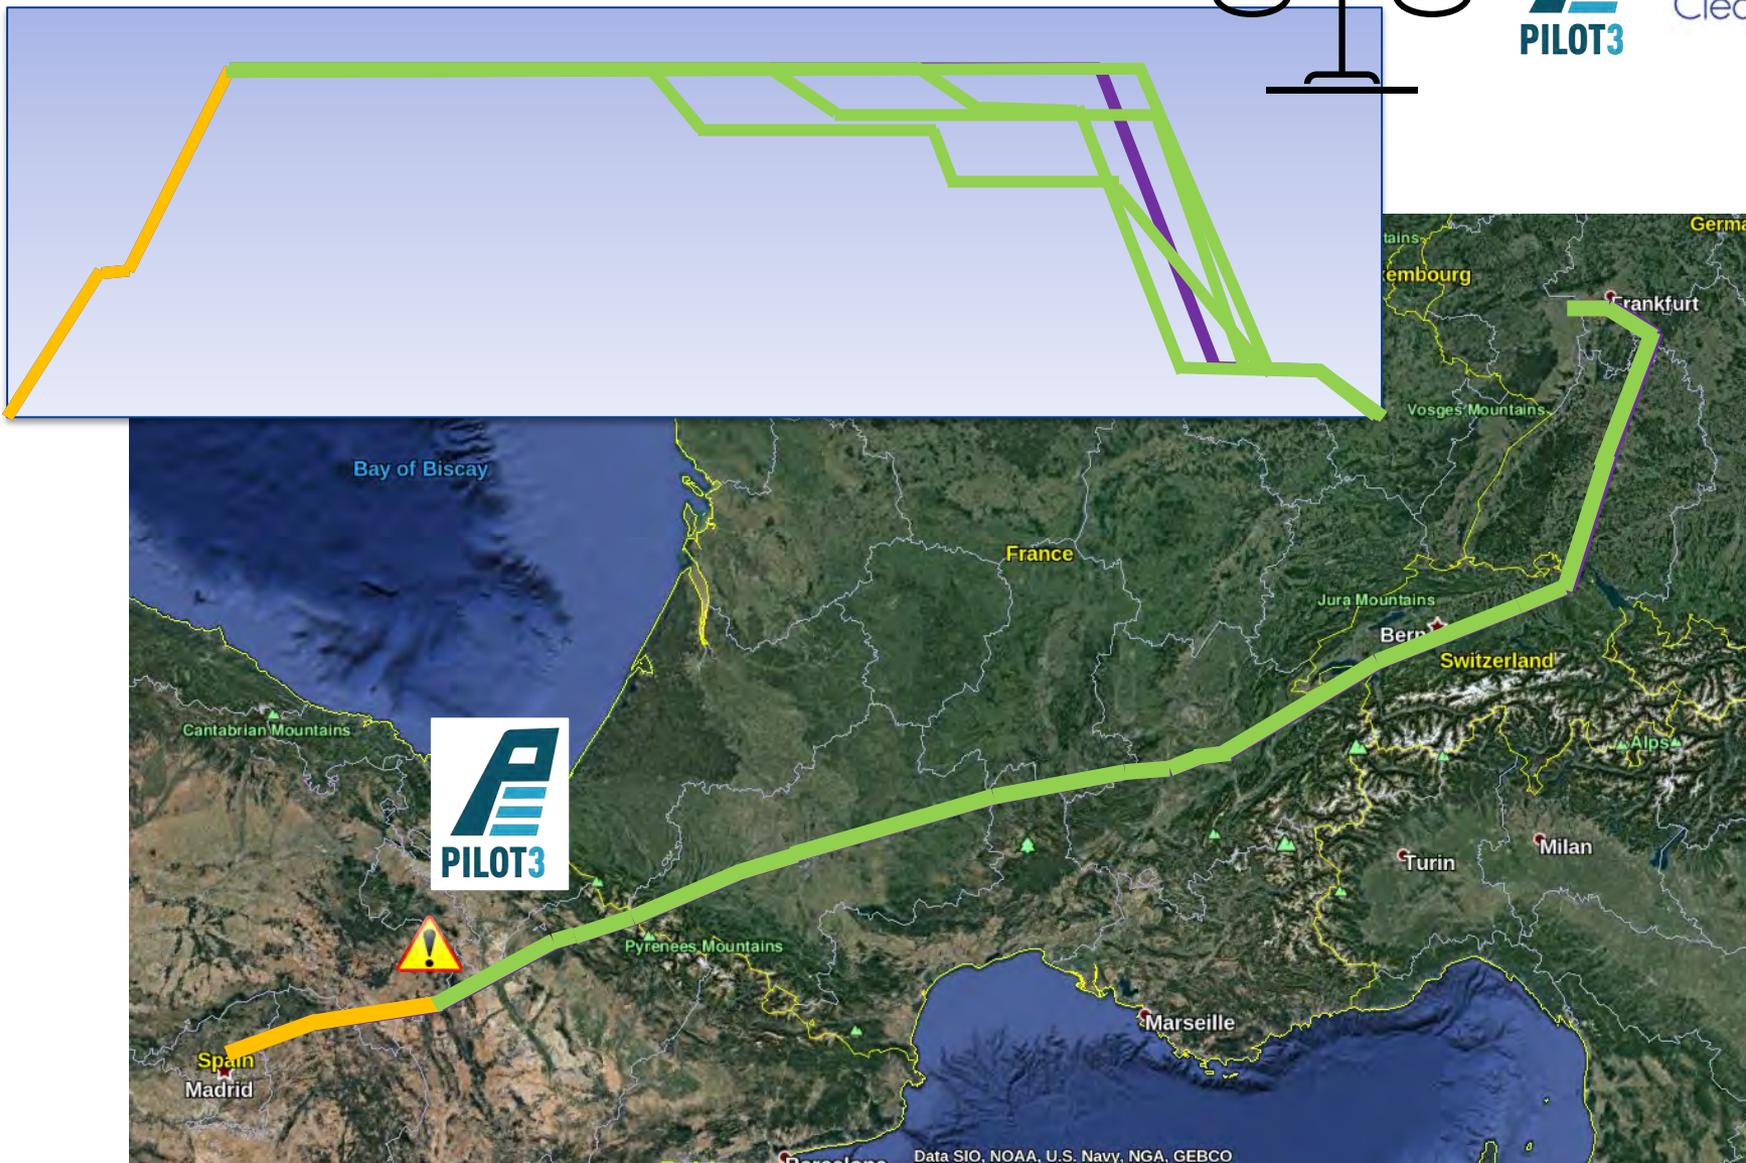

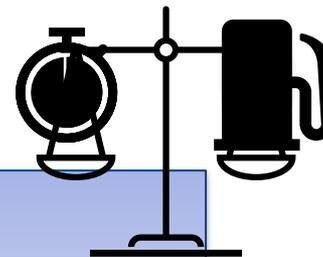

Pilot3 – What is it about?

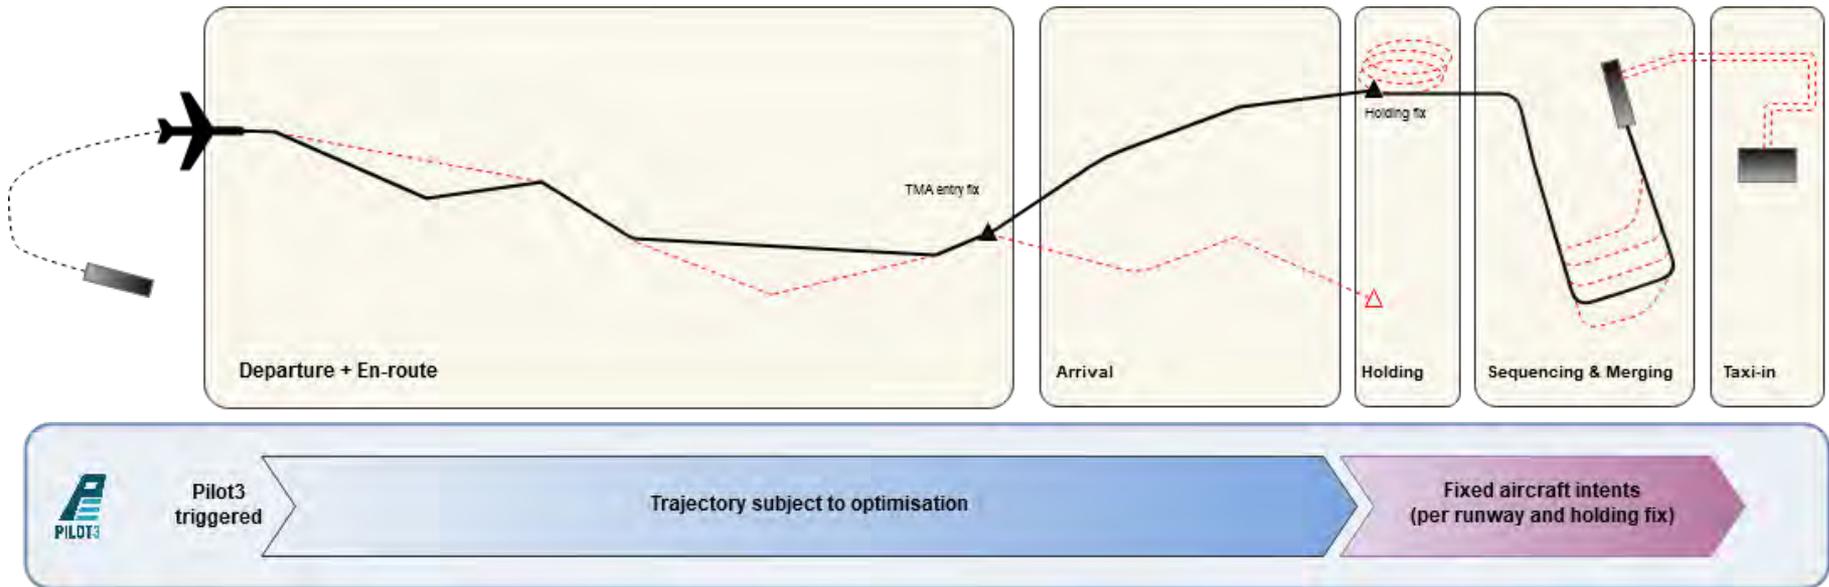

Pilot3 – What is it about?

Pilot3 – What is it about?

Pilot3 – Objective function

- Optimisation of vertical profile (from triggering point to FL100)

Pilot3 – Objective function

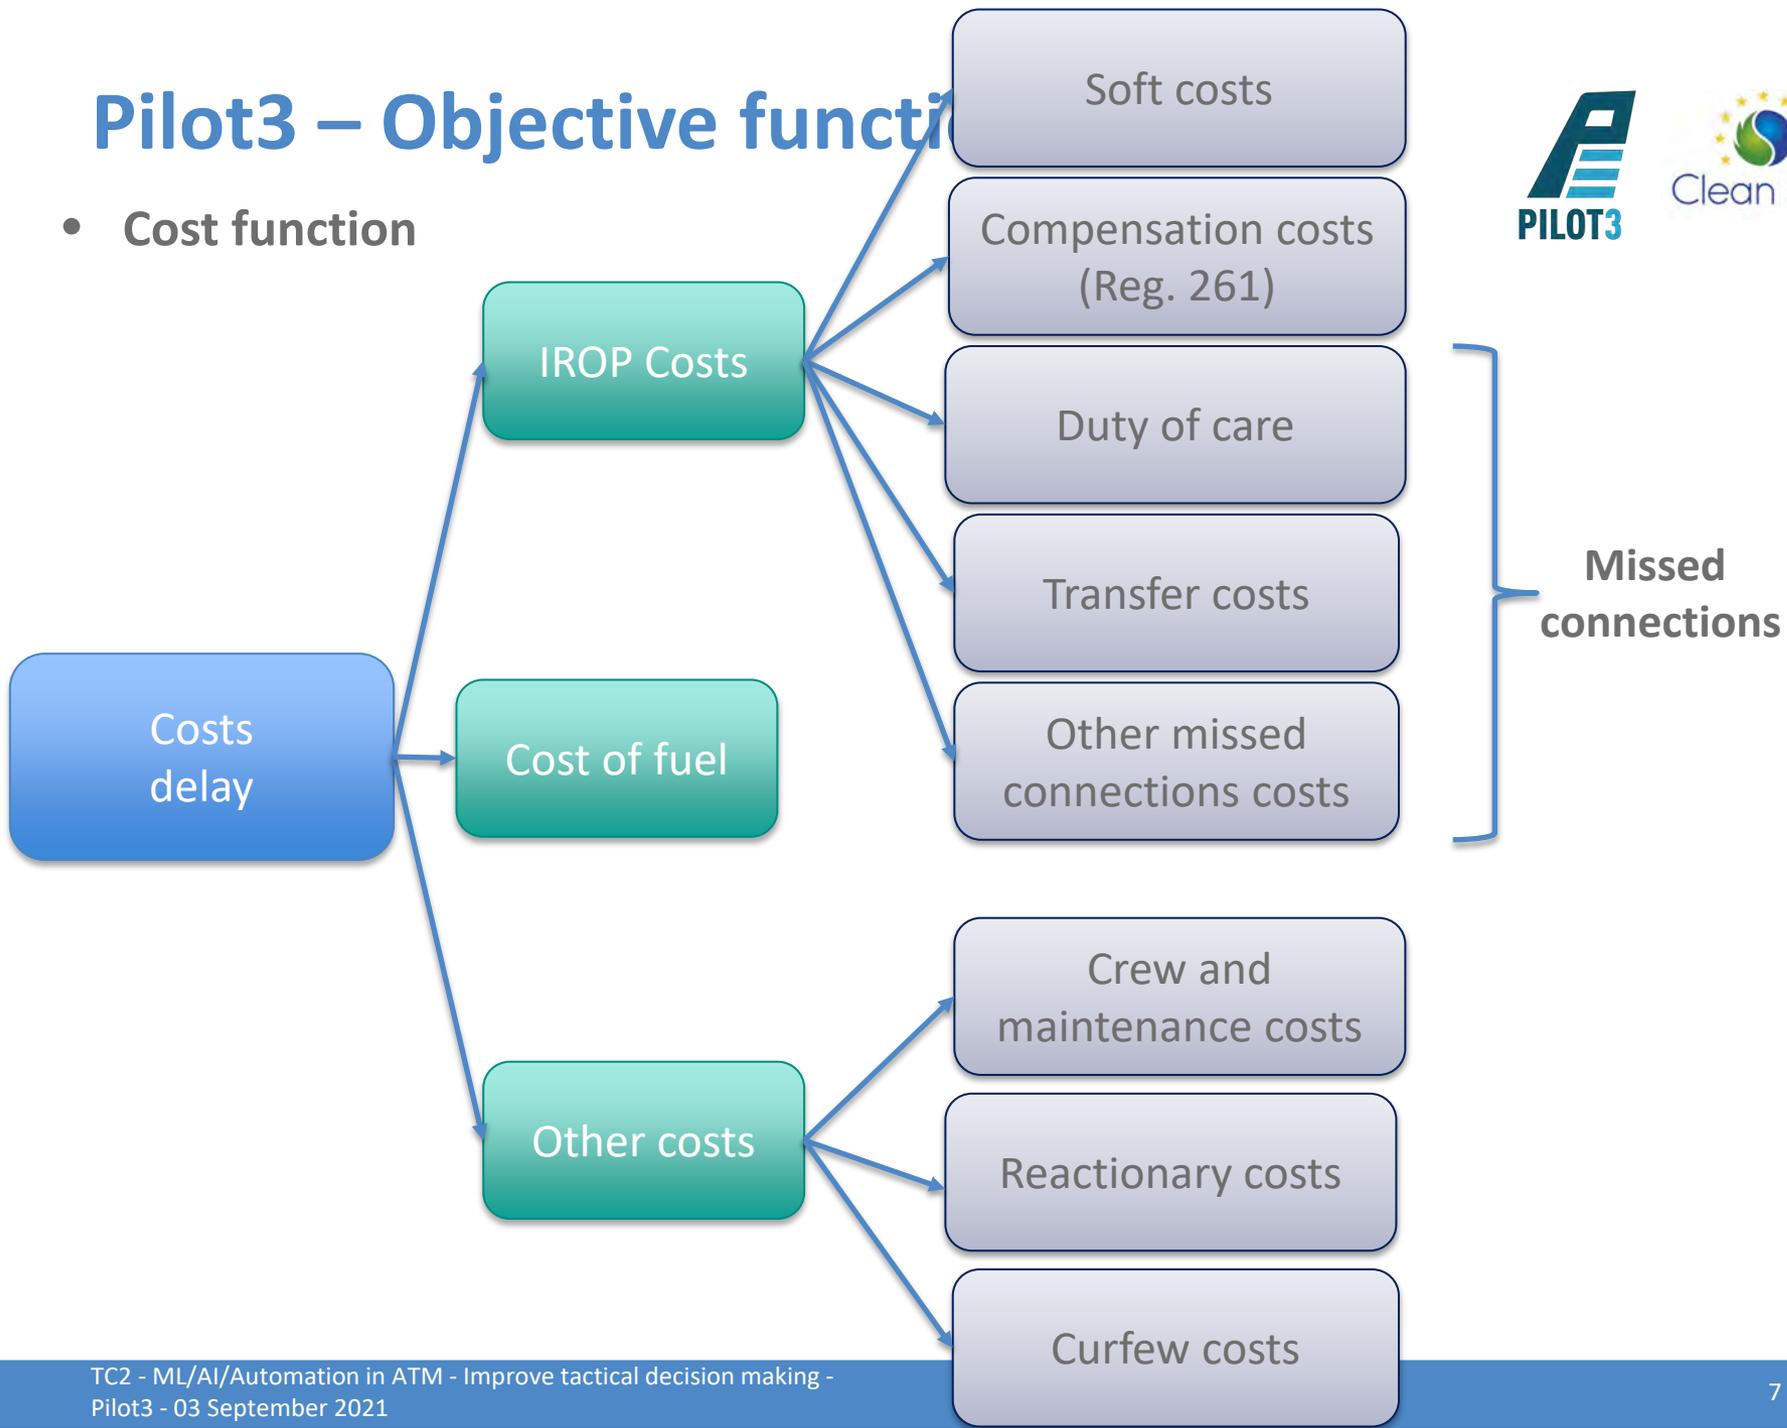

Cost Index

$$\frac{\text{Cost Time}}{\text{Cost Fuel}}$$

- Cost function

Pilot3 – Compe

Pilot3 – Components

Pilot3 – Machine learning models

For cost function generation

- Reactionary delay estimation
 - Ground time
 - Gate-to-gate time
- Missed connections
 - Connecting time
 - Departure of possible connecting flights

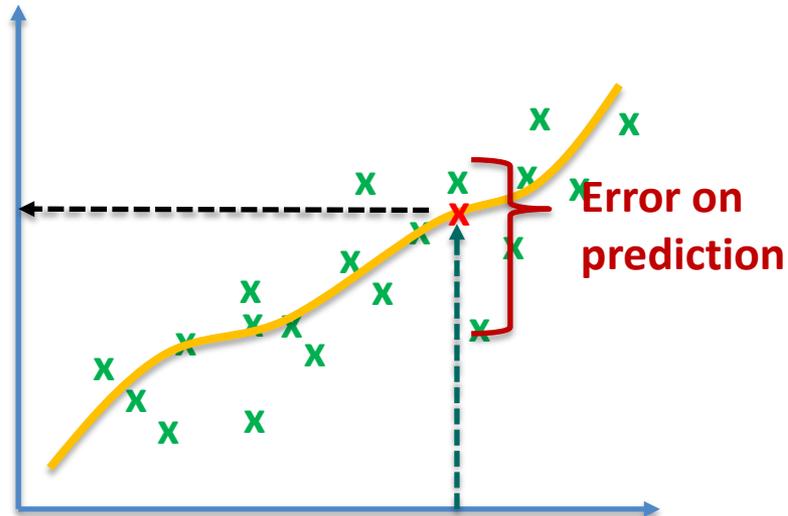

For uncertainties in model

- Holding at arrival (minutes)
- Flight distance from FL100 to runway (NM)
- Taxi-in time (minutes)

Pilot3 – Machine learning models

Challenges

1. Need of distribution not only average expected value

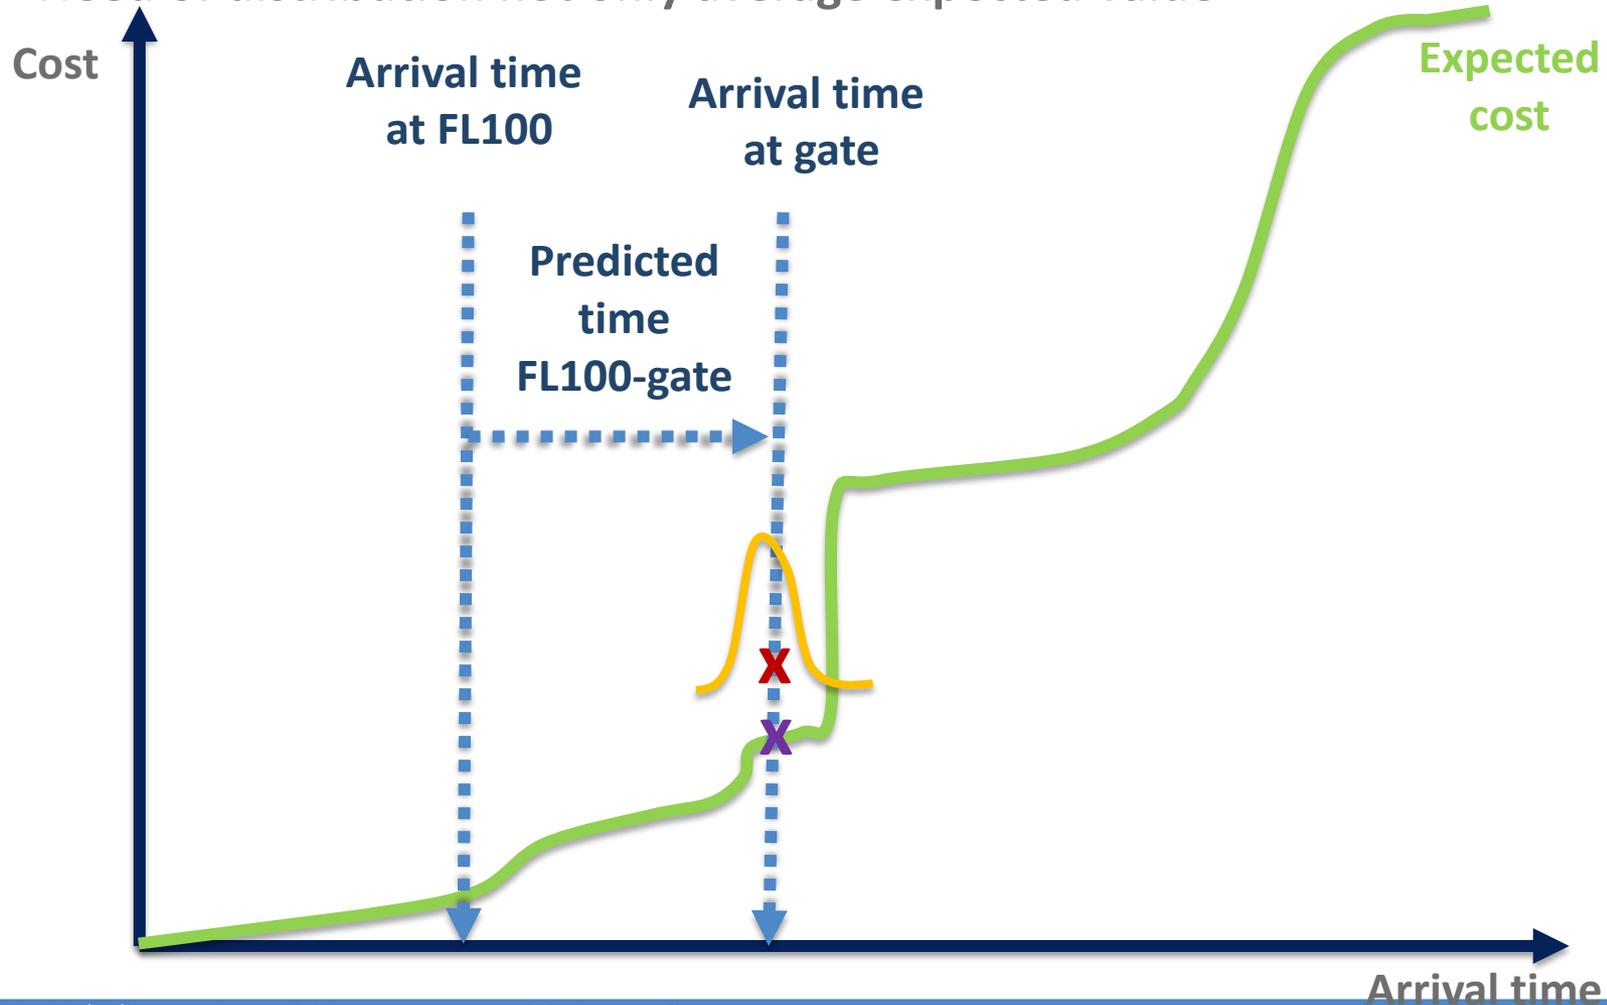

Pilot3 – Machine learning models

Supervised learning

Pilot3 – Machine learning models

Challenges

2. Prediction-horizon

Supervised learning

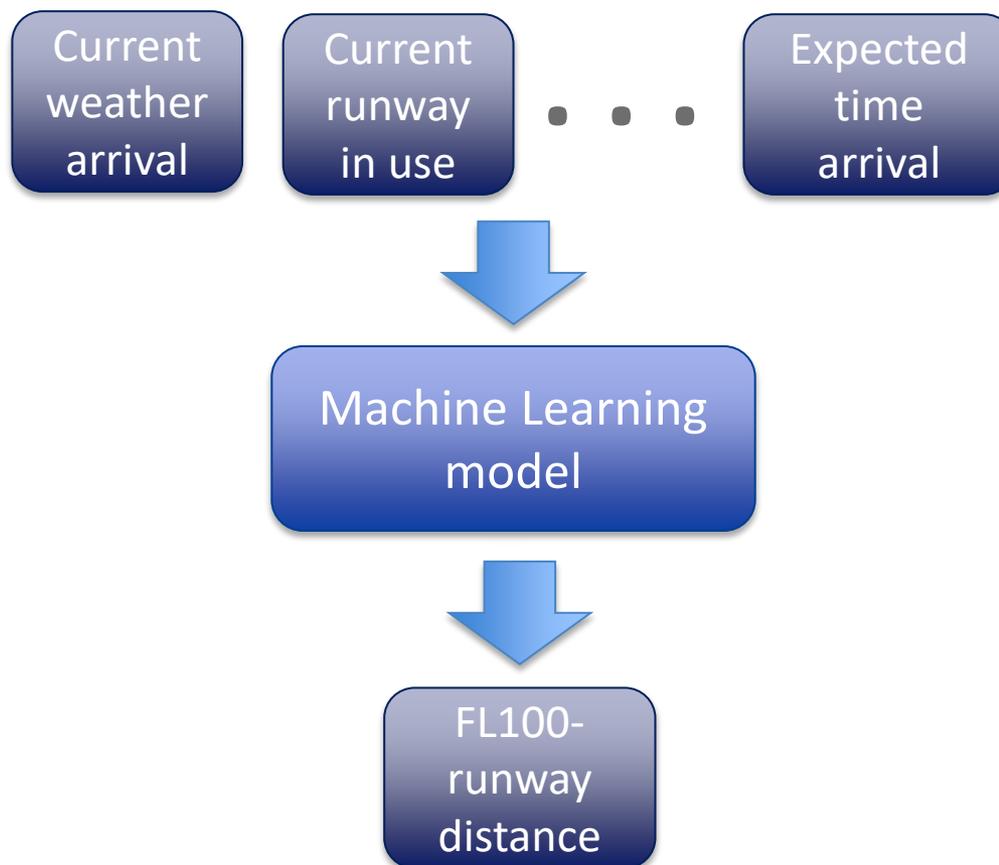

Pilot3 – Machine learning models

Challenges

Same problem: Prediction of distance from FL100 to runway

Different data (environment)

Pilot3 – Machine learning models

Challenges

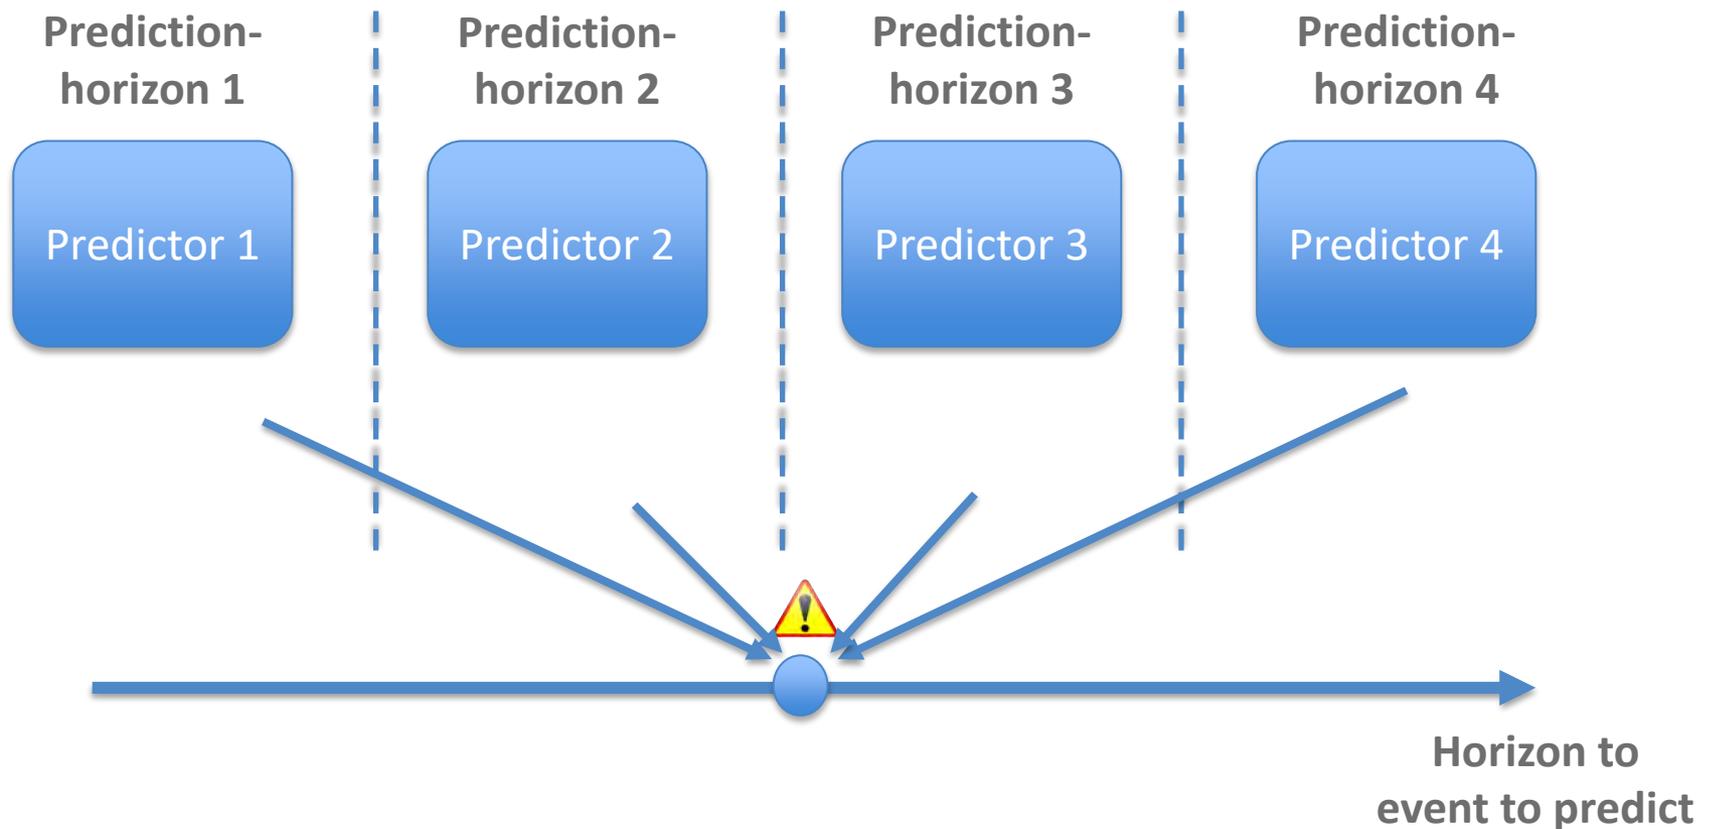

Reactionary delay estimation:

Flying and ground times with long lookahead times

Pilot3 – Machine learning models

Challenges

2. Prediction-horizon

Pilot3 – Machine learning models

Challenges

3. Multi-model approach

+ Accuracy
- Uncertainty
- General

More specific models

More and more advanced features

- Accuracy
+ Uncertainty
+ General

More *generic* models

Fewer and simpler features

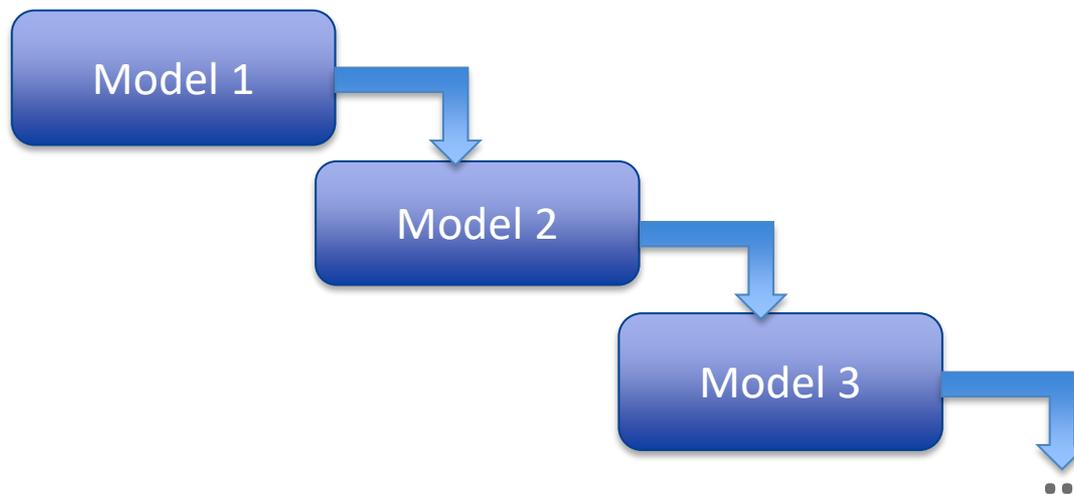

Pilot3 – Machine learning models

Challenges

3. Multi-model approach

Specific
More advanced features
Ground-updated data

Which model to use for a given prediction:
trade-off
accuracy/uncertainty/
genericity

Generic
Fewer features
Air-available data

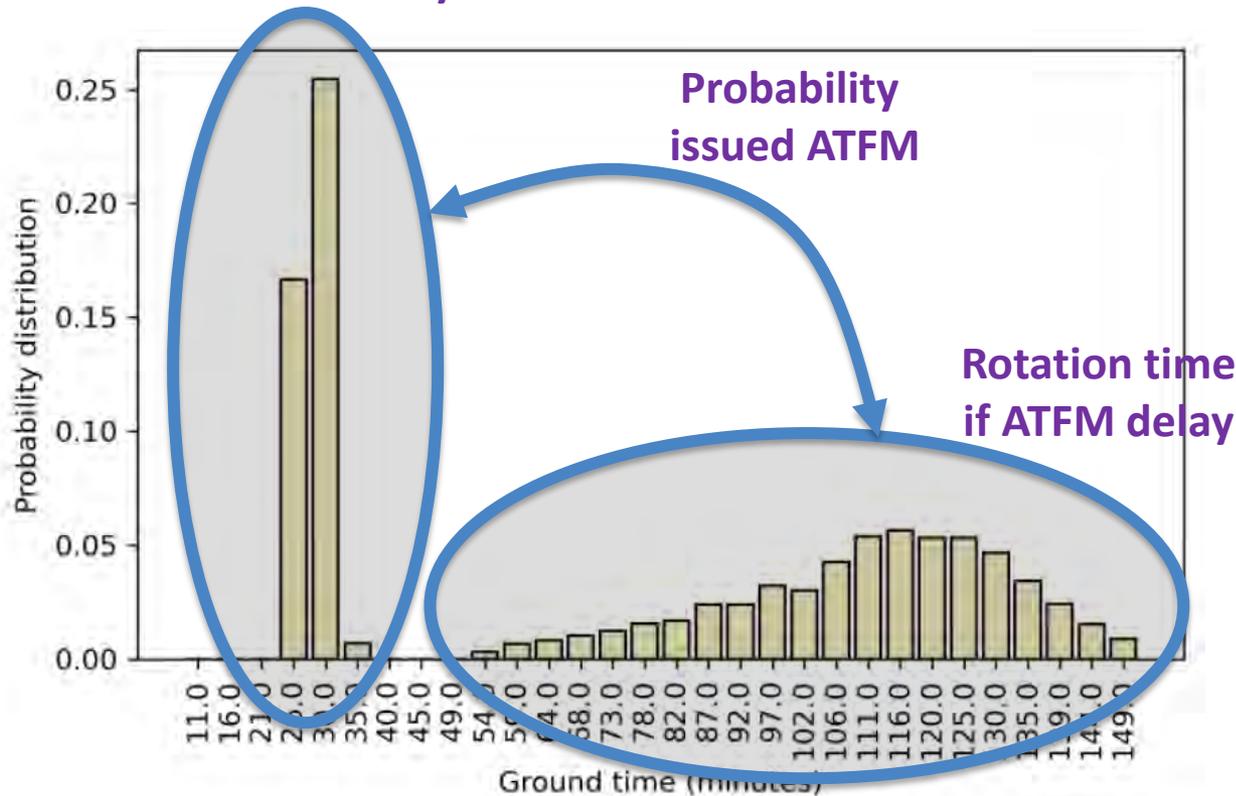

Pilot3 – Machine learning models

Challenges

3. Multi-model approach

Estimation of complex interactions integrating models

Rotation time
no-ATFM delay

Propagation of errors across models?

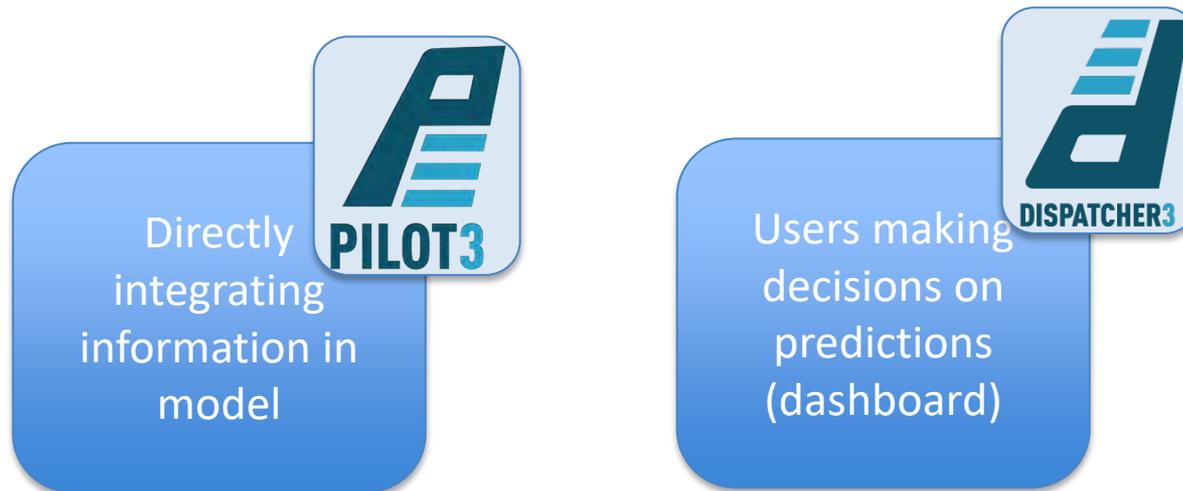

Pilot3 – Machine learning models

Challenges

4. Visualisation – interpretability

Using predictions with uncertainties → How to present the information to users?

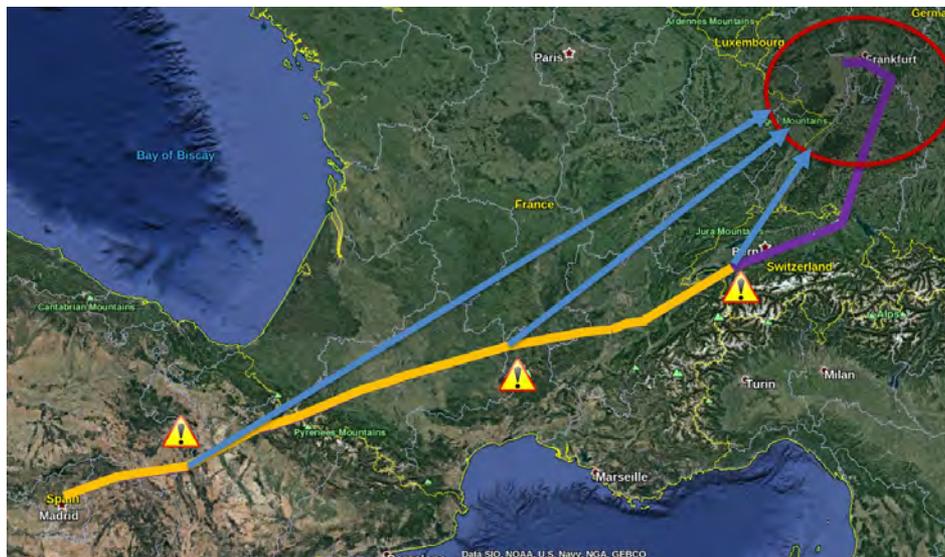

Pilot3 – Machine learning models

Challenges

5. Data!

Historical data at different prediction-horizons by different users?

How to extract information from data (features computation)?

Pilot3 – Conclusions

- **Machine learning models in Pilot3**
 - Used to compute cost function components
 - Used to estimate uncertainties that affect operations
- **Challenges (most of them applicable to ATM in general)**
 1. Need of distribution not only average expected value
 2. Prediction-horizon
 3. Multi-model approach
 4. Visualisation – interpretability
 5. Data!
