Description

The long awaited iDrumTune Professional drum tuner app is now available! For a limited time get iDrumTune Pro as a special introduction offer with 50% price reduction!

iDrumTune Pro is the world's most advanced, accurate and intelligent system for assisting and educating on drum tuning – used by thousands of drummers all over the world!

IT'S LIKE A GUITAR TUNER – BUT FOR DRUMS !

"an invaluable aid not only for drummers but also studio engineers and producers" – Sound on Sound Magazine

"I can't recommend this app highly enough ... for the money, it is indispensable. It's simple, accurate, looks good, and the tuning information is worth the cost of the app alone." – www.mikedolbear.com

"***** I never knew I could have this much fun tuning drums!" – Adamrod (App Store review)

"***** Just tuned my first drum and this app is awesome!" – bburt85 (App Store review)

"***** Buy this app if you are a drummer!!!" Lildrummerboy (App Store review)

Since the first iDrumTune App was launched in 2012, we have dreamt of incorporating a number of innovative tuner features, which are now available in the most professional and accurate version of iDrumTune ever. Now iDrumTune Pro brings unrivalled accuracy and features that have never been possible before for assisting with drum tuning.

iDrumTune Pro includes the following features:

* Pitch Tuning – to make your drums sing and allow you to play musical phrases around the kit

* Lug Tuning – to ensure that the drumhead is evenly tuned and gives a smooth and warm tone

* Resonant Head Tuning – to allow you to be sure that the two heads are working together and giving rich overtones

* Spectrum Analyzer – so you can really start to understand what frequencies are excited and heard when playing the drums

* Drum Kit Presets – so you can save and load your favorite tunings and share them with the world

* The Science of Drum Tuning – and extensive manual on the science and art of drum tuning and getting the best out of iDrumTune Pro

iDrumTune is the first and by far the most intelligent and accurate system for analyzing drum sounds and assisting tuning – developed by drummers, music producers and acoustics research Professors. iDrumTune provides you with a measurement of the drumhead vibration frequency, much in the same way to an acoustic guitar tuner which measures the vibration frequency of a guitar string. In Pitch Tuning mode, you simply hold the iPhone over the center of a drum, about 2–4 inches away, and strike the drum in the center.

The iDrumTune readout shows the recorded sound waveform and gives the strongest frequency recorded. There is also a tuning indicator bar which shows the drumhead tuning relative to musical notes, so iDrumTune can be used to ensure that your drums are in key with each other or the song you are playing. A frequency spectrum view also allows more detailed analysis and helps with tuning the drum at the lug positions.

IDrumTune Pro provides advanced tuning features including an intelligent filter function, Lug Tuning mode and Resonant Head Tuning mode. The filter allows unwanted frequencies to be ignored by the analysis algorithm, whilst Lug Tuning mode offers the simplest and most innovative method for tuning an even frequency response at the lug positions on the drumhead.

The new Preset Manager allows you to save all your favorite drum tunings and call them up when you are in the middle of the process. Drum kits can also be exported and imported, so you can share your favorite tuning setups and load new ones in from other drummers.

Drum Tuning isn't easy, and drums don't respond exactly the same way every time you hit them. For that reason, it's valuable to know a little about the science of drum tuning. iDrumTune includes a comprehensive text on the science of drums and drum tuning in order to help you get the best of iDrumTune and to become an expert drum tuner!
