Applying Accessibility Tools to Address Urban and Transport Planning

The Case of the Eurocity of Valença-Tui and the Euroregion of Galicia-Norte de Portugal
APPLYING ACCESSIBILITY TOOLS TO ADDRESS URBAN AND TRANSPORT PLANNING

The case of the Eurocity of Valença - Tui and the Euroregion of Galicia-Norte de Portugal

Edited by Sabina Pulawska and Silvia Rossetti

COST - European Cooperation in Science and Technology is an intergovernmental framework aimed at facilitating the collaboration and networking of scientists and researchers at European level. It was established in 1971 by 19 member countries and currently includes 35 member countries across Europe, and Israel as a cooperating state. COST funds pan-European, bottom-up networks of scientists and researchers across all science and technology fields. These networks, called ‘COST Actions’, promote international coordination of nationally-funded research. By fostering the networking of researchers at an international level, COST enables break-through scientific developments leading to new concepts and products, thereby contributing to strengthening Europe’s research and innovation capacities.

COST’s mission focuses in particular on:

- Building capacity by connecting high quality scientific communities throughout Europe and worldwide;
- Providing networking opportunities for early career investigators;
- Increasing the impact of research on policy makers, regulatory bodies and national decision makers as well as the private sector.

Through its inclusiveness, COST supports the integration of research communities, leverages national research investments and addresses issues of global relevance. Every year thousands of European scientists benefit from being involved in COST Actions, allowing the pooling of national research funding to achieve common goals.

As a precursor of advanced multidisciplinary research, COST anticipates and complements the activities of EU Framework Programmes, constituting a “bridge” towards the scientific communities of emerging countries. In particular, COST Actions are also open to participation by non-European scientists coming from neighbour countries (for example Albania, Algeria, Armenia, Azerbaijan, Belarus, Egypt, Georgia, Jordan, Lebanon, Libya, Moldova, Montenegro, Morocco, the Palestinian Authority, Russia, Syria, Tunisia and Ukraine) and from a number of international partner countries.

COST’s budget for networking activities has traditionally been provided by successive EU RTD Framework Programmes. COST is currently executed by the European Science Foundation (ESF) through the COST Office on a mandate by the European Commission, and the framework is governed by a Committee of Senior Officials (CSO) representing all its 35 member countries.

More information about COST is available at [www.cost.eu](http://www.cost.eu).

The Scientific Training School 20121 of the COST Action TU1002 “Accessibility Instruments for planning practice” that took place in Naples from 17th to 22nd June 2012 has gathered for the first time the group of JRN members of the Action who had been working during a week under the supervision of a group of MC members. This constituted an important occasion to create a stronger scientific connection. In particular, the Action TU1002 proposes a multidisciplinary approach to evaluate the incorporation of accessibility instruments in common planning practice. This broader approach may benefit more from the focused work of the JRN as a group on different issues related to the Action’s theme, rather than from isolated contributions. In this sense the Naples STS was a unique occasion to train the group of JRN members on the methodologies that have been later implemented during the field work of the Action, specifically in the WUs, with the promotion of a better understanding of

1 The STS was organised by three MC members: Enrica Papa, Enrique Calderon and Nuno Norte Pinto, with the support of the Department of Urban Planning of the University of Naples Federico II. Four other MC members took an active role in the STS; these were: Cecilia Silva, Pierluigi Coppola, Marco te Brömmelstroet and Dimitris Milakis. A total of 22 Junior Researchers representing twelve different countries and different backgrounds participated in the STS: Jeroen Cant (Belgium), Hugo Repollo (Switzerland), Benjamin Büttner (Germany), Avigd Vassilis (Greece), Elena Masala, Enza Chiararzo, Floriana Zucaro and Valentina Pinto (Italy), Janko Vollmer (Netherlands), Lene Bjørne (Norway), Sabina Palawska and Wojciech Spryka (Poland), Ana Amante and Tiago Patatas (Portugal), Matija Polajnar (Slovenia), Alberto Dominguez Sarabia, Mariemil Carasquel and Silvia Rossetti (Spain); and finally, Saleem Karou and Carol McKenzie (UK). Three local students from the University of Naples, Gennaro Angello, Gaia del Giudice and Pasquale Inglese, completed the rest of the group.

the methodologies and providing some standardization of the work developed in each case study by each WU, as JRN members were belonging to the WU teams. In this sense, the STS was a great opportunity to tune in different aspects of the methodology. The work was focused on a simulated test of the entire WU methodology with the JRN, whose members have been divided into different groups and played a specific role, impersonating a potential participant in the workshops of a WU (developers, planning or decision-making officials, stakeholders) and some others worked on the pre-, on-going, and post-evaluation procedures.

The accessibility instrument which has been tested is the “SNAP – Station network Accessibility Planning” developed by the Work Unit of Naples, which combines accessibility network measures and the Node-Place model (Bertolini, 1999) to define TOD scenarios. The test area was the metropolitan area of Naples, Caserta, and Salerno. During this work, the JRN members were guided by invited Trainers belonging to the TU1002 Cost Action and in particular Cecilia Silva from the University of Oporto, Nuno Norte Pinto from the University of Oporto, Marco te Brömmelstroet from the University of Amsterdam, Dimitris Milakis, from the University of Athens and Enrica Papa, from University of Naples.

Furthermore the first experience of STS within the TU1002 Action offered a unique training for PhD and Master students by lectures from leading international experts in the field and also a high knowledge of the test site area: prof. Ennio Cascetta from University of Naples Federico II , prof. Agostino Nuzzolo from the University of Rome Tor Vergata, prof. Pierluigi Coppola from the University of Rome Tor Vergata, prof. Francesco Domenico Mecchia from the University of Naples Federico II and Francesca Pagliara from the University of Naples Federico II. Topics included accessibility planning, transport impacts on land use, transport modelling, urban and regional planning.

Moreover, in the STS programme some walking tours in Naples were included, in order to better understand the urban context in which the participants had to develop their project.

Finally, the Naples Training School, within the framework of the Action topic, had the main effect of wider the knowledge of the Action activities, of providing intensive training on a new and emerging subject, and of offering familiarization with unique know-how, not only to the JRN members, but also to the trainers and the lecturers guests. All the participants come from a diverse set of academic origins covering urban and spatial planning, transport planning, civil and environmental engineering, computer sciences, architecture, and geography. This diversity constituted an important asset in line with the spirit that supports the concept of the JRN, of the STS and in general of the COST Action.

Abstract

The COST Action TU1002 provided the opportunity for creating a sub-group of young researchers, who formed a new team known as Junior Research Network (JRN). The JNR was invited to participate in two Summer Training Schools (STSS). The first took place in Naples (IT) during the summer of 2012, while the second was held in the Eurocity of Valença (PT) / Tui (ES) during the summer of 2013. This chapter provides an overall evaluation of the two STSS. It outlines their goals, activities and achievements, and provides an overview of the self-evaluation of the JRN carried out together with a presentation of its results. The chapter also includes acknowledgments of professors and people who contributed to the realisation of the STSS.

Keywords: Junior Research Network (JRN); Naples; Valença; Tui; Summer Training School (STS); Eurocity; COST Action; TU1002.

1 Introduction

European Cooperation in Science and Technology Action, Transport and Urban Development 1002 (COST Action TU1002), themed “Accessibility instruments for planning practice in Europe”, began on October 6, 2010 and will be completed on October 5, 2014. Its Management Committee (MC) members come from twenty countries, bringing together a wide variety of cultural and disciplinary backgrounds.

One of the outputs of the COST Action TU1002 has been the Junior Research Network (JRN). This is a network of students and young researchers in the field
